Events Finder

The new way of discovering events

Events Finder

An application the uses facebook API to fetch events that are located near the user.

Application Features

1. select a city
2. RSVP for an event.
3. change your location.
4. change date range.
5. see which friends going to a certain event.
6. manage your own events.

Application Views

A user can select between two views for seeing the events:

1. Map based view.

2. Grid based view.

From these pages a user can discover these events.

Settings Page

1. A user can select the range of events on a selected area.

2. user can log out from application.

Business Plan

Promote events on the platform.

Future Releases

- Enhance user experience.
- Categories events.
- Implement other backends for example meetup, twitter.
- Fetch user events and manage them on the cloud. It will help giving more relevant events for all users.
